[Portfolio](#)

Profile

Computer Science student with a strong foundation in data manipulation, statistical analysis, and database management. Hands-on experience building ETL pipelines, querying relational databases, and developing interactive dashboards using Python, SQL, and Power BI. Capable of translating complex datasets into actionable business insights.

Education

Surajmal College of Engineering and Management

Bachelor of Technology in Computer Science, CGPA-7.8

2021 – 2025

Kichha, Uttarakhand

Kids Paradise Senior Secondary School

Intermediate- 72.4%

2018-2020

Dineshpur, Uttarakhand

Experience

Elevanceskills Technology Pvt. Ltd.

August 2026- Present

Data Analytics Intern (Python, Pandas, Plotly)

- Clean and validated large real-world dataset using Python and Pandas to ensure accurate, error-free analysis.
- Build multiple interactive Plotly dashboards to visualize app trends and support data-driven decisions.
- Convert analytical finding into a shareable HTML dashboard using Plotly and JavaScript for easy presentation.

Technical Skills

Programming Languages: SQL, Python

Tools/Frameworks: Excel, Power BI, Tableau, VS Code, Power Query, DAX.

Additional skills: Statistical Analysis, Data Visualization, Data Management, Data Analysis, Data Cleaning, ETL

Cloud & Data Platforms: AWS (S3).

Projects

Basket Analysis | Power BI

- Cleaned and structured 9,000+ grocery transactions using Power Query to build a clean data model.
- Used DAX to calculate Support, Confidence, and Lift, finding whole milk + vegetables as the top combo (6.4% support).
- Built an interactive Power BI dashboard to show top-selling products and combinations out of 170 unique items.

Google Play Store Analytics | Python, Pandas, Plotly

- Cleaned a 10,000+ row Play Store dataset by validating ratings, installs, and reviews to ensure accurate analysis.
- Built 6 interactive Plotly charts to analyze app trends by category, rating, and installs.
- Built a simple HTML dashboard using Plotly and JavaScript to display the charts in a browser without needing a server.

Walmart Sales Analysis | SQL, Python

- Wrote SQL queries to analyze 9,969 transactions across 100 branches and 3 payment methods.
- Ranked 6 product categories by profit, finding Fashion accessories as the top earner at \$192K.
- Grouped sales by shift (morning/afternoon/evening) to find peak transaction times across \$1.21M in total sales.

Hospitality Analysis | Power BI, Power Query, DAX

- Calculate key metrics like occupancy rate (57.87%) and revenue realized (\$1.71B) using DAX.
- Cleaned booking data with Power Query and found 33,420 cancellations and 6,759 no-shows to spot booking trends.

Certification

Complete Data Analyst Bootcamp by Udemy (90 hours) [CERTIFICATE](#)

Data analysis by cognitive class [CERTIFICATE](#)

Data analysis by HP Life. [CERTIFICATE](#)
